Handwritten derivation showing the expansion of the product of matrices:

$$(I + m_1^t e_1)(I + m_2^t e_2) = I + m_1^t e_1 + m_2^t e_2 + \underbrace{m_1^t e_1 m_2^t e_2}_0$$

The term $m_1^t e_1 m_2^t e_2$ is zero because $1 < 2$. The next step shows the expansion of the product of the first two matrices with the third matrix:

$$(I + m_1^t e_1 + m_2^t e_2)(I + m_k^t e_k) = \underbrace{I + m_1^t e_1 + m_2^t e_2}_Z + m_k^t e_k + 0 + 0$$

The term Z represents the sum of the identity matrix and the first two matrices. The term $m_k^t e_k$ is the product of the third matrix and the identity matrix. The terms $0 + 0$ represent the products of the first two matrices with the third matrix, which are zero because $1 < k$ and $2 < k$.
